Don:

See the information below:

Metal Samples: Wipe samples were performed of the interior and exterior metal surfaces (4 exterior, 2 interior ceiling,

Concrete Samples: No concrete samples of any kind have been taken – it will have to be tested to see if it is TSCA or Non-TSCA. I could not imagine that we would have to run TCLP but maybe so we need to ask Republic.

Wood Samples: No wood samples of any kind have been taken – it will have to be tested to see if it is TSCA or Non-TSCA. I could not imagine that we would have to run TCLP but maybe we need to ask Republic.

FJD04-09-PCS01-20181004-81: This is an exterior paint sample to check for PCB (Aroclor 1268 – Galbestos) and for Lead

WIPE SAMPLES: All of the wipe samples were to check for PCBs on the surface of the metals to see if the material could be recycled or if it had to be disposed.

WS01 – WS08 (6 samples plus 2 duplicates): Interior Metal Wall Wipe Samples  
WS09 – WS12: (4 samples): Exterior Metal Wall Wipe Samples  
WS13 – WS14 (2 samples): Interior Metal Ceiling Wipe Samples

After thinking about this, we will need roll-off box(es) to store the wood until we get it tested (TCLP and PCBs?) as requested by Republic.

Cheryl—

Answering your questions in order:

1. **What purpose was the building used on site?** The building formerly housed F.J. Doyle Salvage, which was a concern involved with recycling out-of-service power transmission

transformers for recoverable metals.

2. **What activities or processes occurred in the building?** As the site has been abandoned for several years, it is our assumption that drained carcasses and commercially viable metals were stored inside and probable disassembly of the drained carcasses ensued to recycle same.
3. **What possible contaminants may have been used in it?** Again, our assumption is that some organic wastes may have been spilled inside the building's floor, probable copper, lead and other minute amounts of metals.
4. **How was it determined that no contamination exists in the materials that is to be disposed?** See attached analytical report; specifically analyses on 16 wipe samples taken from wood, metal and concrete areas inside the structure to be demolished.
5. **Please have the generator describe their process for ensuring no contaminated materials is designated for inclusion with C&D for disposal. Additional analytical may be required.** The building will be removed in small, discrete sections and visually assessed for any staining or abnormalities. Debris will be further segregated into metals, concrete, glass and wooded stockpiles and further evaluated prior to loading.

Attachment: ALS Laboratories Final Report – HST 18100338 Final Level II.

All of the wipe samples (16) were taken from various locations on the building and were collected by Weston Services, Inc. representatives.

If you have any other questions/comments, please advise.

Regards,

Don

Don,

We have received an incomplete on the United States Environmental Protection Agency Region 6 / Construction & Demolition Debris Profile 34161818258 citing:

“Please have the generator add more details to their process generating waste: for what purpose was the building used on-site? What activities or processes occurred in the building? What possible contaminants may have been used in it? How was it determined that no

contamination exists in the material that is to be disposed? Please have the generator describe their process for ensuring no contaminated material is designated for disposal. Additional analytical may be required.”

“What is the metal that constitutes up to 30% of the waste? Please have the generator describe.”

Thank you,

**Cheryl Muegge**

**ROUTE INSTRUCTIONS:**

This workflow is designed to support Special Waste Profile packages that are submitted by Coordinators. The workflow does the following:

- 1) The Special Waste Profile is routed to the Analysts Queue.
- 2) The Analyst reviews the Profile Package and either selects 01 - Approved the Request, 02 - Insufficient Information, or 03 - Inacceptable Material.
- 3) If options of 01 or 03 are selected (Approved or Rejected), the Coordinator is notified. If 02 - Insufficient Information is selected the Coordinator is assigned a workflow task to send the Analyst additional information.
- 4) Once the Profile is officially approved or rejected, the support document is named using an autopath and then moved to an archive folder.

**STEP INSTRUCTIONS:**

Please review the appended notes on the Special Waste Profile package for missing information. Please then email the missing information to the analyst that declined this Special Waste Profile package.
